Quick Start: Microsoft Flow

Congratulations! You're ready to automate some of your manual processes.

Automation of manual or in-efficient processes has a measurable return on investments. But how do you get started?

Don't worry! Implementing new technology and processes can seem like a daunting challenge. We often hear said as "We don't know what we don't know" or "We didn't know that tool would be a good fit for that business problem".

The Quick Start: Microsoft Flow offers foundational knowledge of the tool, and how it can be used with different data and contexts outside of SharePoint. This day and a half workshop is designed for power-users to learn and quickly apply skills to automate a business problem. The engagement consists of the following three pillars:
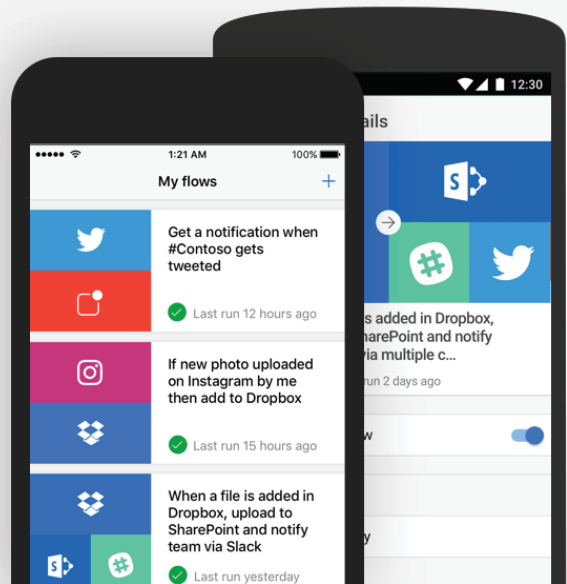

» **Understand**
Learn core features and use-cases of Microsoft Flow. This is like teaching an artist about the brushes and the canvas's they will paint on.
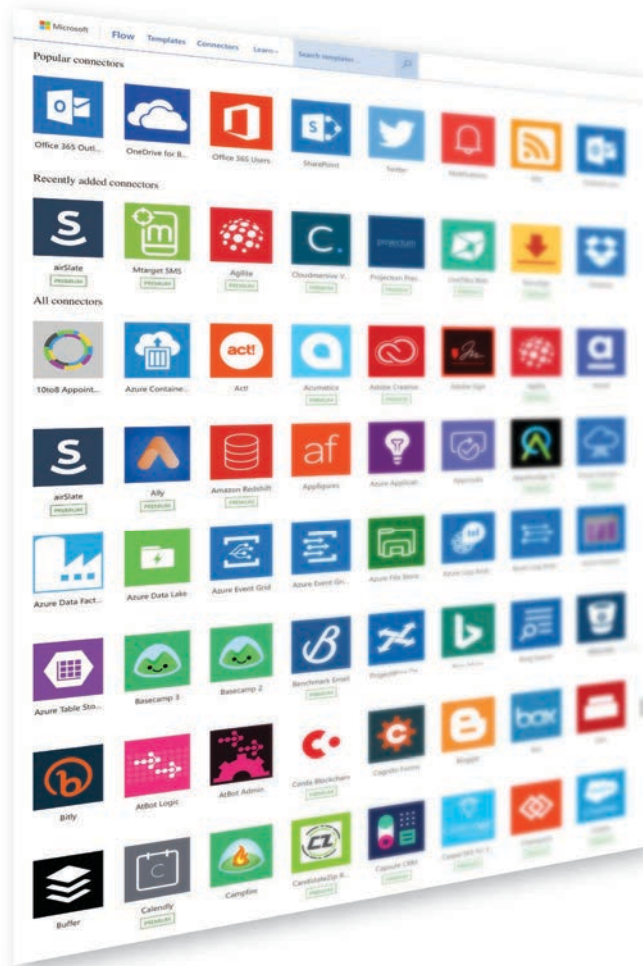

» **Design**
Dive into a current business situation that your organization is facing. Design an approach for how Microsoft Flow can be used to streamline or automate the situation.

» **Build**
During the last session you will work with your consultant to build the solution to your organization's situation.

RETHINK BUSINESS. **RE**THINK **IT**.

I'm ready to Quick Start Automation, but...

What will we gain?

» A fully functioning flow based on your organization's business processes

» An understanding of how a Microsoft Flow is triggered

» Knowledge on how to work with actions, expressions, logic and conditions

» The ability to setup automated approvals

» An understanding of how to connect with different data sets

» The ability to administer Flows

» Best Practices for building low-maintenance Flows

» How to use the Flow Mobile Application

How will it work?

1. Pre-engagement survey to understand your business priorities
2. In-Person Day-and-a-Half Workshop
3. A complete Flow based on your automation needs

Where do I start?
